

**CUSTOMIZATION TO MEET  
ANY REQUIREMENT**

# Ballistic Box

 **CyberNational, Inc.**

[www.cyber-national.com](http://www.cyber-national.com)

Our Ballistic Box is designed to accommodate those extreme high velocity/frangible projectiles that may otherwise disintegrate when fired into water. Extended, variable-angle shooting port and barrel rest increase examiner safety and comfort.

**100% Stainless-Steel construction!**

The 8' x 10.5" x 10.5" rectangular tube contains 7 ft. of highly packed, neatly layered medical cotton. Includes a compression crank to compact the cotton for better stopping power and releases the cotton for early retrieval.

The beefy steel tube mounts on a center pivot height adjustment which allows a fully adjustable shooting angle, and the four-sided enclosure opens completely in half for ease of retrieval. The entire platform rolls on heavy-duty locking casters.

**EASE OF RETRIEVAL FOR BULLETS OR BRASS IS  
THE HALLMARK OF THIS SYSTEM.**

The 11 ga. S-S tube is fabricated with an extended shooting port which is generously vented on three sides, a barrel-rest insert machined from 1-inch solid HMW, a 5/8" steel stop plate, and will be shipped with a "self-healing" flame deflector.

The all-stainless steel construction eliminates the need for paint and insures a long, maintenance-free life for your valuable equipment.

# ACCESSORY

The Brass Catcher is a feature on CyberNational's Bullet Recovery Systems and Ballistic Box that captures the brass from semi-automatic handguns or rifles when needed for evidence.

The recovery bag is made of a see thru mesh type material and can be adjusted for use on semi-automatic handguns or rifles. The Brass Catcher can be customized to fit other brands of bullet recovery equipment.
